Divinycell HP

THE HIGH PERFORMANCE SANDWICH CORE

Divinycell HP has been developed to meet demands in high temperature systems, and low temperature prepreg systems. The unique PVC chemical structure, yields impressive mechanical performance to a low weight. Divinycell HP's elevated temperature performance also extends to its 'in service' life as it will retain a high percentage of its mechanical properties despite exposure to high ambient temperatures.

It offers high properties in all significant areas including mechanical performance, elongation to break, ductility, adhesion/peel strength, fracture toughness and dimensional stability. Other key features of Divinycell HP include excellent chemical resistance, low water absorption and good thermal/acoustic insulation

1. Properties measured perpendicular to the plane

Nominal value is an average value of a mechanical property at a nominal density

Minimum value is a minimum guaranteed mechanical property a material has independently of density

PRODUCT CHARACTERISTICS

- Low water absorption
- High temperature resistance
- High strength and stiffness to weight ratio
- Low water absorption
- Superior damage tolerance
- Fast and easy to process
- Good chemical resistance
- Acoustic and thermal insulation
- Consistent and homogenous material
- Low resin uptake

2. Thermal conductivity at +10 $^{\circ}\text{C}$
3. Standard deviation is 0.045

Normally Divinycell HP can be processed at up to +145 $^{\circ}\text{C}$ with minor dimensional changes. The foam can be used in sandwich structures, for outdoor exposure, with external skin temperatures up to +100 $^{\circ}\text{C}$.

Maximum processing temperature is dependent on time, pressure and process conditions. To confirm that Divinycell HP is compatible with users particular processing parameters, and for optimal design of applications used in high operating temperatures in combination with continuous load, please contact Diab Technical Services.
